6.3 Document Scope and Updates 36

1 Introduction

The purpose of this manual is to provide faculty members with a comprehensive, step-by-step reference for navigating, managing, and optimizing courses within the CANVAS Learning Management System (LMS). It covers key areas such as course setup, content organization, assessment design, gradebook management, and strategies for student engagement, using the latest features of CANVAS LMS as of 2026.

All faculty members are enrolled in the **"Growing with Canvas"** course, which provides detailed, hands-on guidance for designing, managing, and navigating courses within the CANVAS LMS. This manual is intended to serve as a supporting reference to that course, offering a concise summary of its key concepts and workflows. Faculty are highly advised to complete the **"Growing with Canvas"** course (Fig. 1) after reading this document, as it contains comprehensive instructions, examples, and best practices that go beyond the scope of this manual.

If the course does not appear on the Dashboard, faculty may locate it under the *Courses* section (see Section 2, Fig. 5) and mark it as a favorite by clicking the star icon so it will appear on the Dashboard.

Growing with Canvas Course Link:

https://usjr.instructure.com/courses/106

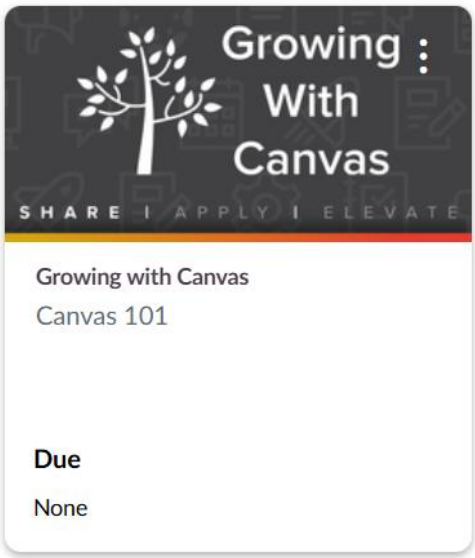

Fig. 1. Growing with Canvas Course Card

Learning Objectives of This Manual

Upon using this manual, faculty members will be able to:

- Efficiently create and organize courses using CANVAS modules and content tools.
- Design and manage online assessments, including quizzes and assignments with rubrics.
- Utilize the gradebook and analytics to monitor student performance and engagement.
- Enhance student interaction through announcements, discussions, and external tools.

2 Course Setup and Content Management

2.1 Dashboard and Courses Tab

The Dashboard (Fig. 2) serves as the central hub for accessing all courses assigned to a faculty member. It provides a clear overview of active courses, recent activity, and notifications. Courses are managed through the **Courses** tab (Fig. 4), where all assigned courses are listed. To ensure that a particular course appears on the Dashboard, the star icon beside the course name must be activated. Only courses with a filled star (Fig. 5) will be visible on the Dashboard, allowing faculty to prioritize active courses while minimizing clutter. Faculty may also rearrange course cards on the Dashboard by dragging them into their preferred order and customize their appearance by changing the color shades through the ***Options*** menu (three-dot button) (Fig. 3) on each course card, making courses easier to identify at a glance.

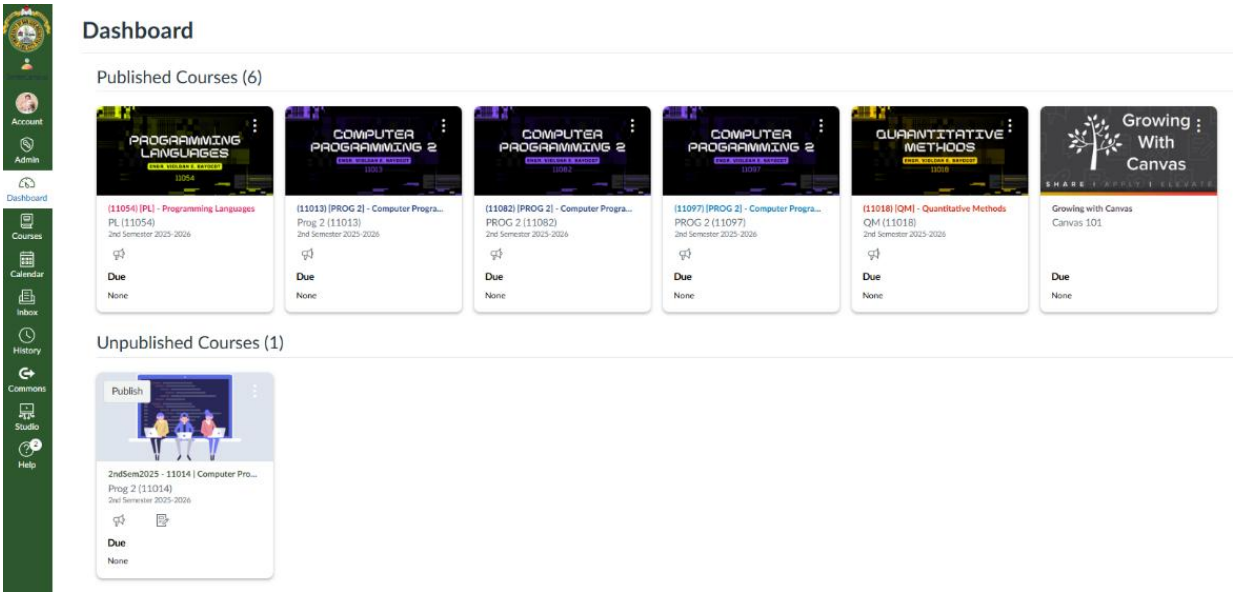

Fig. 2. Dashboard View of USJ-R Canvas LMS

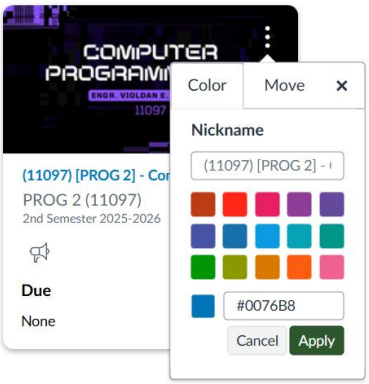

Fig. 3. Course Card Options

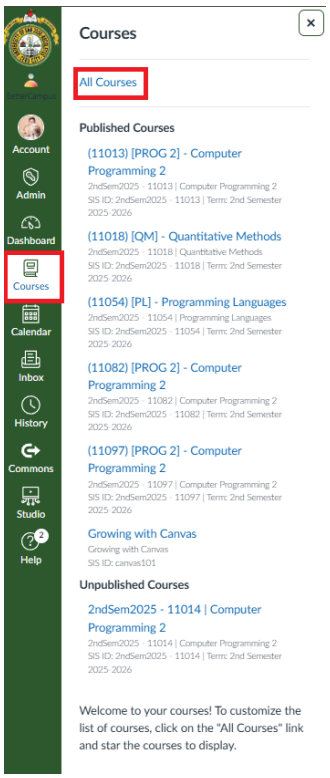

Fig. 4. Courses Panel and All Courses Button

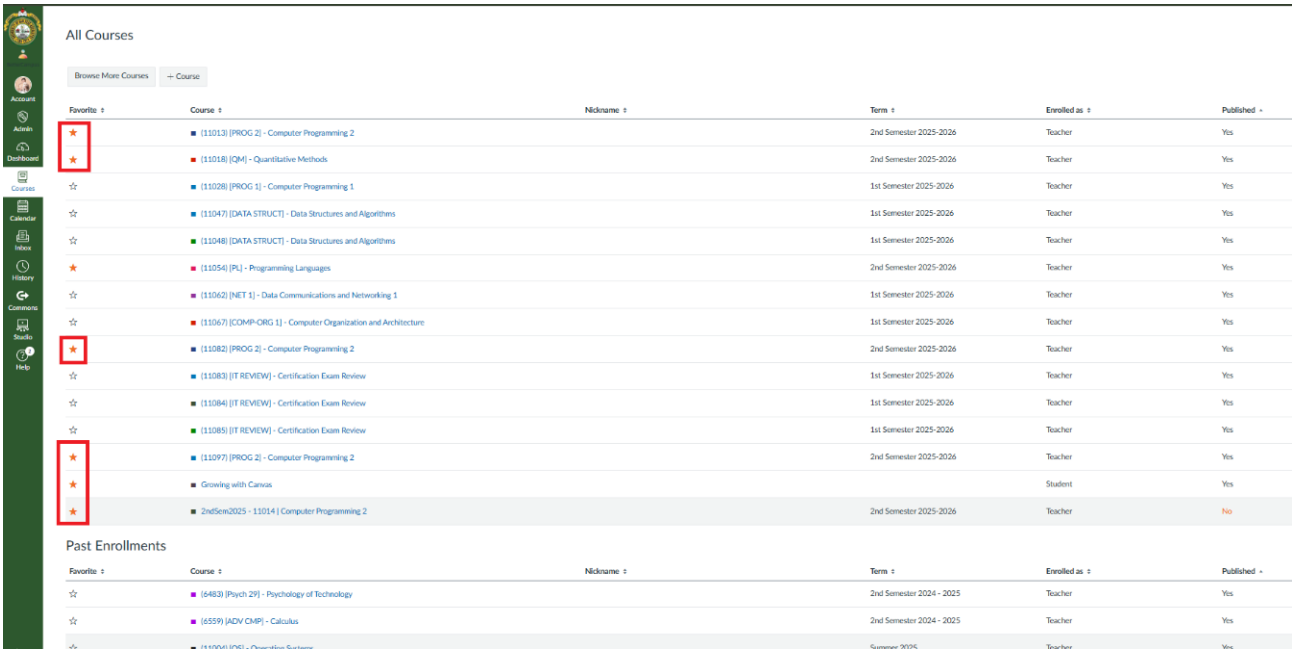

Fig. 5. All Courses View and Starred Courses

2.2 Flow of Course Creation

In our LMS, faculty do not create courses manually. Courses are provisioned centrally based on the teacher's study load and the student enrollment data imported from the Student Information System (SIS). Once a course has been created and assigned, it automatically appears on the faculty Dashboard. Faculty members can then customize course content, structure, and settings, but cannot alter course existence or enrollment. Regular verification of assigned courses on the Dashboard is recommended to ensure completeness.

If a course is not appearing on the Dashboard, faculty are advised to first verify in the SIS that their teaching load has already been properly reflected. **If the teaching load is present in the SIS but the corresponding course does not appear in the LMS, faculty may contact an LMS administrator for further assistance and investigation.**

2.3 Published and Unpublished Courses

Publishing determines whether a course is visible to students. When preparing a course, it is advisable to keep it unpublished until all content is organized and ready for student access (this is up to your discretion). The publishing control is located at the top right corner of the course home page (Fig. 6), and courses may also be published directly from the faculty Dashboard (Fig. 7). Clicking **Publish** makes the course live to students, whereas **Unpublish** hides it. Care should be taken when unpublishing a course, as students lose access to all course content.

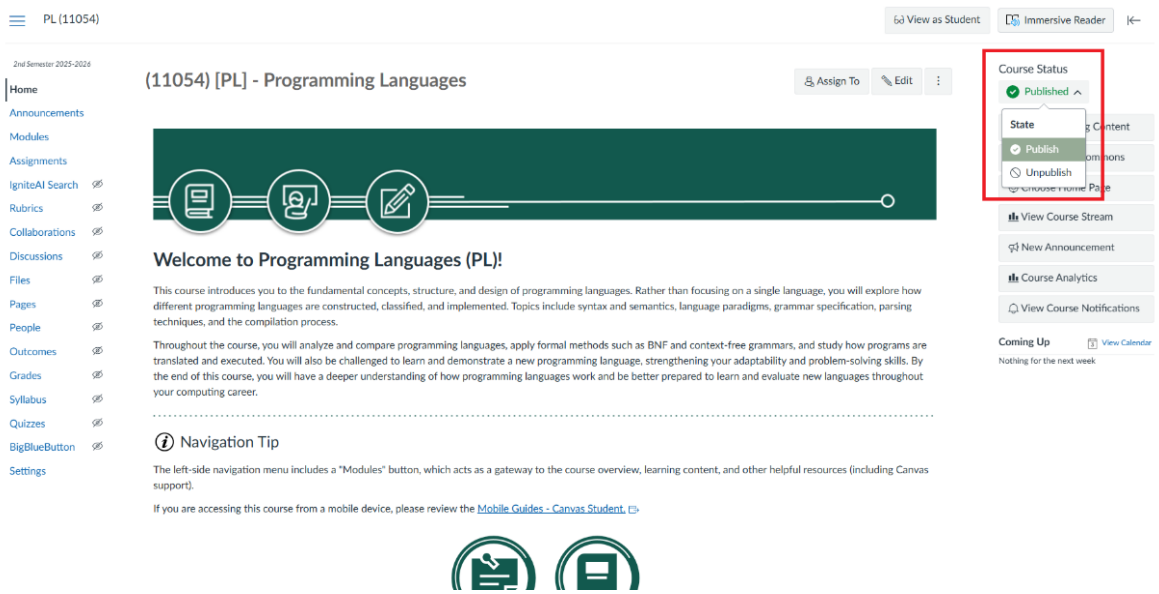

Fig. 6. Publish/Unpublish through Course Home Page

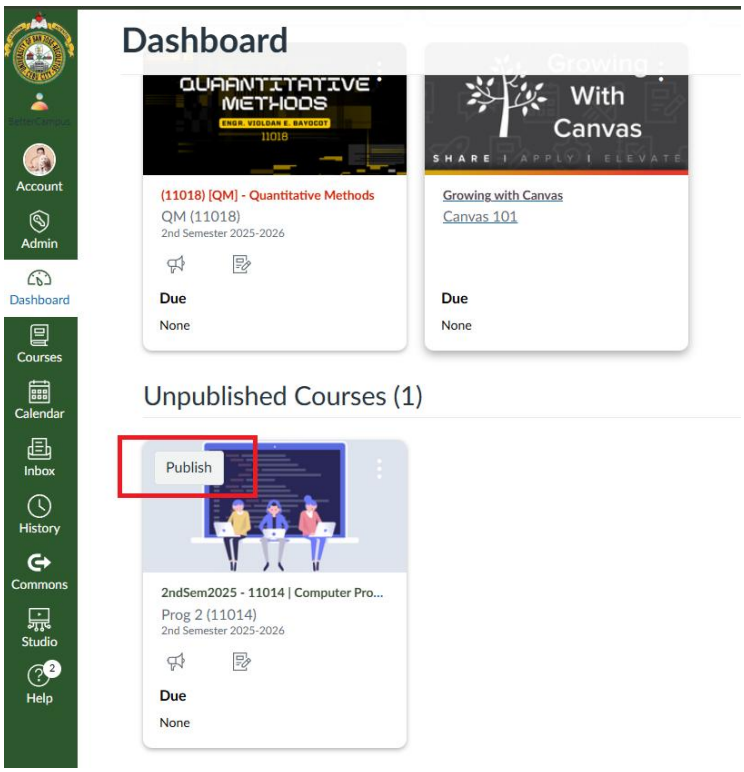

Fig. 7. Publish through Dashboard

2.4 Course Settings

Course Details

Course details (Fig. 9) include the course name, code, description, and visual identity. Editing course details is done via the **Settings** menu (Fig. 8). Faculty may edit or update (Fig. 10) the course name to match official records, add a course image for easy identification, and modify the description to provide students with a clear overview of the course objectives. **Once updates are complete, the changes must be saved (Fig. 11) to take effect.** Consistency with SIS records is essential to avoid confusion. However, certain fields within the Course Details section are restricted and cannot be edited by faculty; these fields are managed exclusively by system administrators to maintain data integrity and institutional consistency.

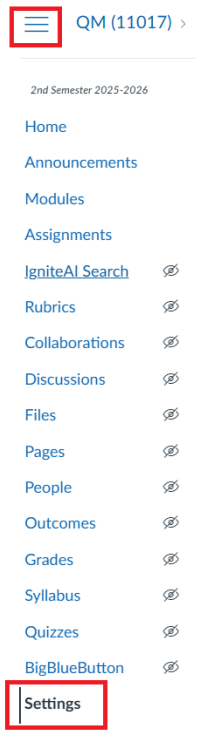

Fig. 8. Accessing Settings

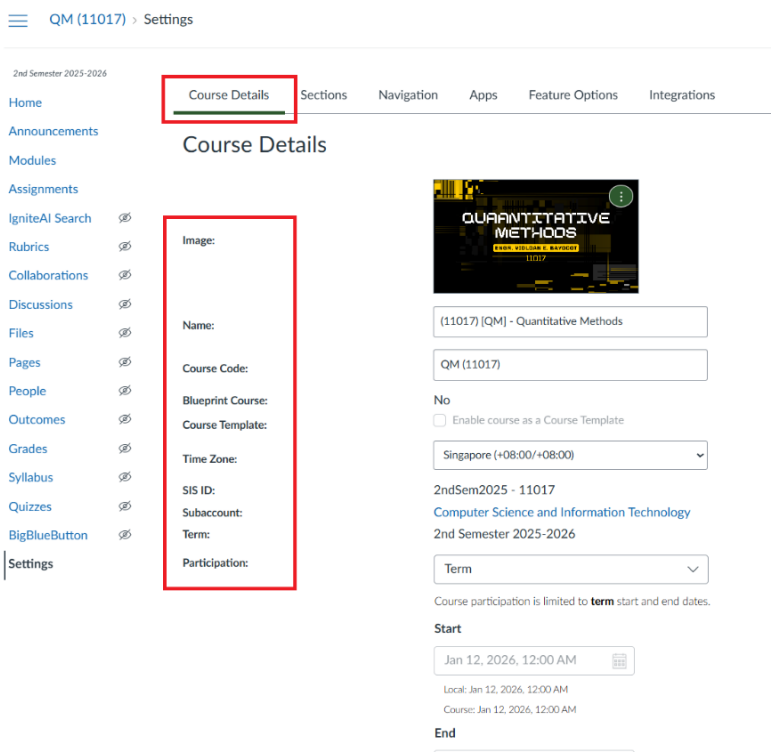

Fig. 9. Course Detail View

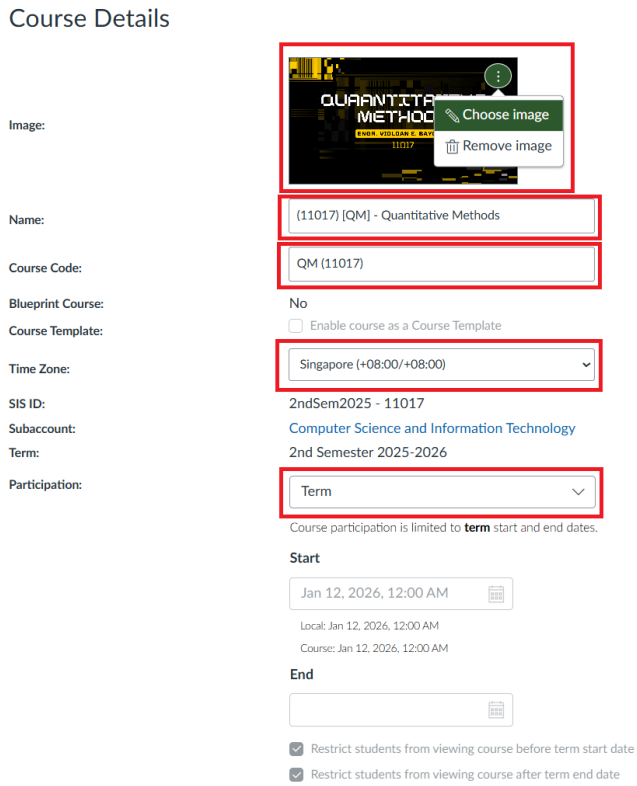

Fig. 10. Editable Fields in Course Detail

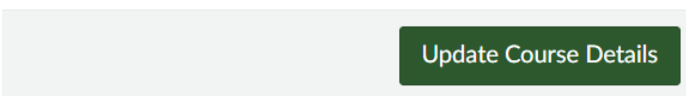

Fig. 11. Update Course Details button

Navigation

The **Navigation** tab (Fig. 12) controls which items appear in the student course menu. Faculty may enable or disable items (Fig. 13) such as **Modules**, **Assignments**, **Grades**, or **Announcements** to streamline the student interface. Only tools and links that are relevant to the course should be made visible to ensure clarity and ease of navigation. **After making any changes, be sure to click the *Save* button (Fig. 14) at the bottom of the page for the updates to take effect.**

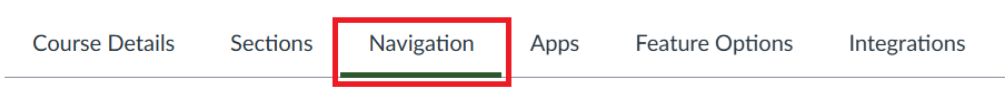

Fig. 12. Navigation Tab

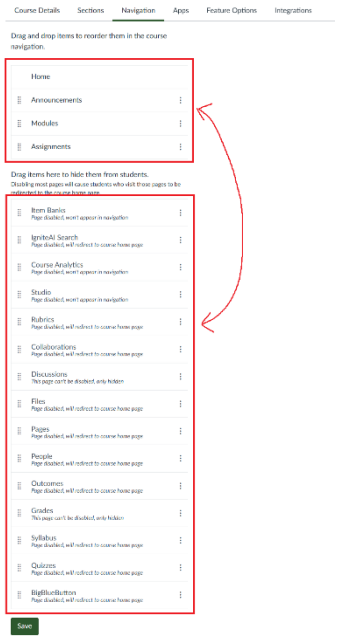

Fig. 13. Pages To Show/Hide in Navigation

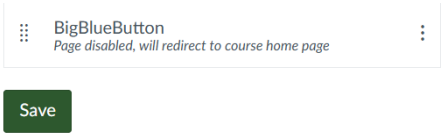

Fig. 14. Save Button in the Navigation

Sections

Sectioning (Fig. 15) is not utilized in our LMS; instead, separate courses are created for different sections to allow better tracking and reporting.

Fig. 15. Sections Tab

Apps, Feature Options, Integrations

Advanced settings (Fig. 16) are excluded from this manual to maintain simplicity.

Fig. 16. Apps, Feature Options, Integrations Tab

2.5 Designing the Home Page

The Home Page (Fig. 17, Fig. 18) is the first interface students encounter upon entering the course and serves as the central orientation point. Faculty should design it to communicate essential course information clearly and efficiently. This may include a brief welcome message, instructor contact information, and quick links to the syllabus, course schedule, announcements, or frequently used modules. Pages may also embed images, videos, or other multimedia elements to enhance clarity and engagement. To avoid overwhelming students, the Home Page should remain concise, with the most important content prioritized at the top and unnecessary elements kept to a minimum.

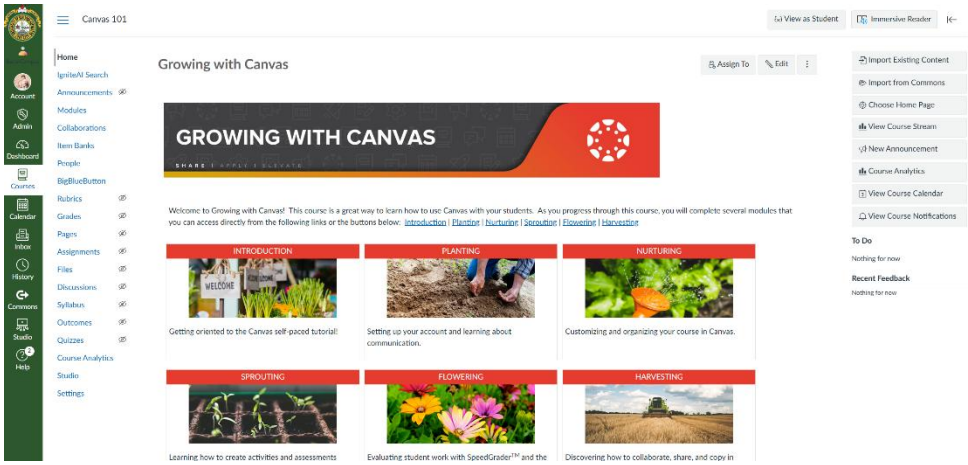

Fig. 17. "Growing With Canvas" Example Home Page

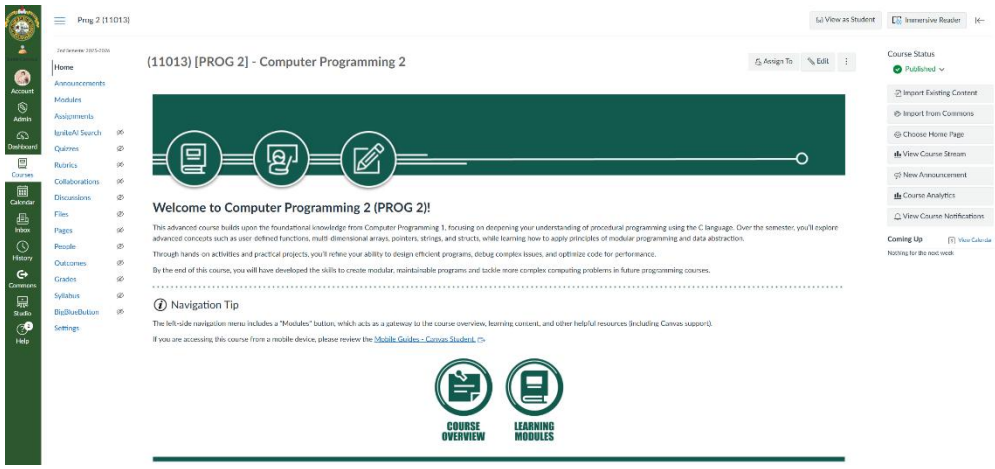

Fig. 18. Simple Home Page example from a fellow faculty

2.6 Organizing Course Modules

Modules (Fig. 19) provide a structured path through course materials, supporting sequential learning and helping students navigate the course efficiently. Faculty can use modules (Fig. 20) to organize pages, files, assignments, discussions, quizzes, and external links according to weeks, units, or topics. **It is highly recommended that the *Modules* tab be enabled and visible to students, as it serves as the primary navigation tool for accessing course content in an organized and logical sequence.**

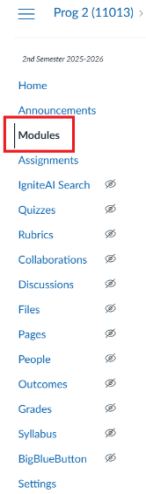

Fig. 19. Modules Tab

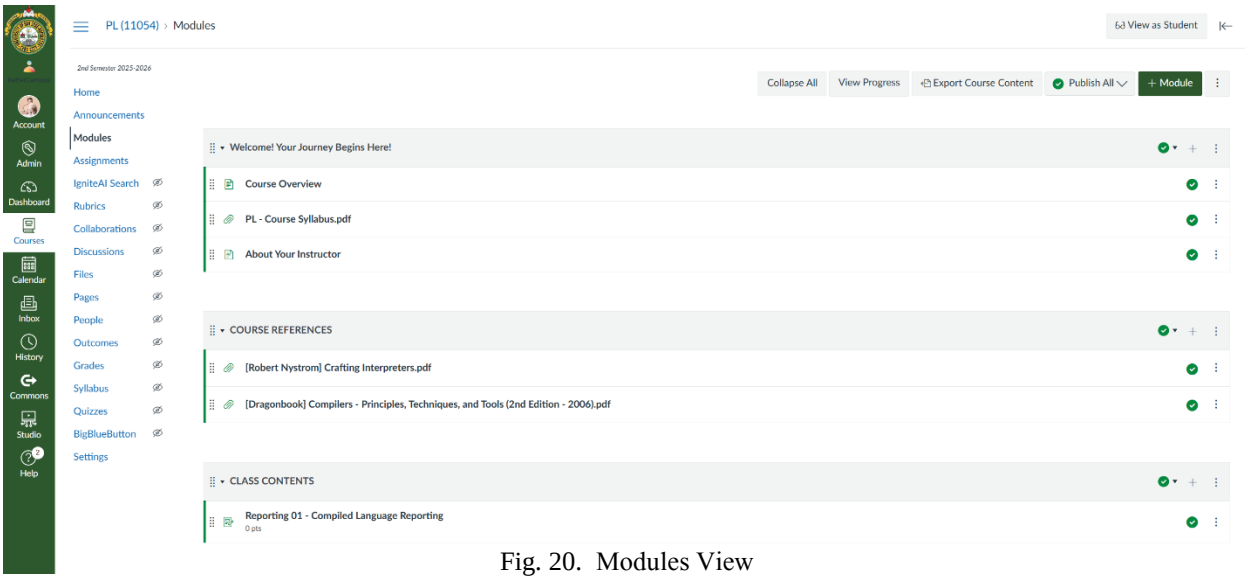

Fig. 20. Modules View

Adding Content

Before adding content, faculty must first **create a module**. Modules can be created by navigating to the **Modules** page and clicking the **+Module** button (Fig. 21). Faculty should provide a clear module name (e.g., by week, unit, or topic) and save the module (Fig. 22). Once created, the module will appear in the list (Fig. 23) and is ready to receive content.

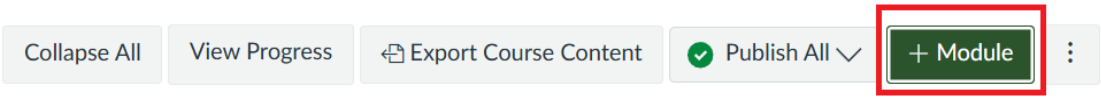

Fig. 21. +Module Button

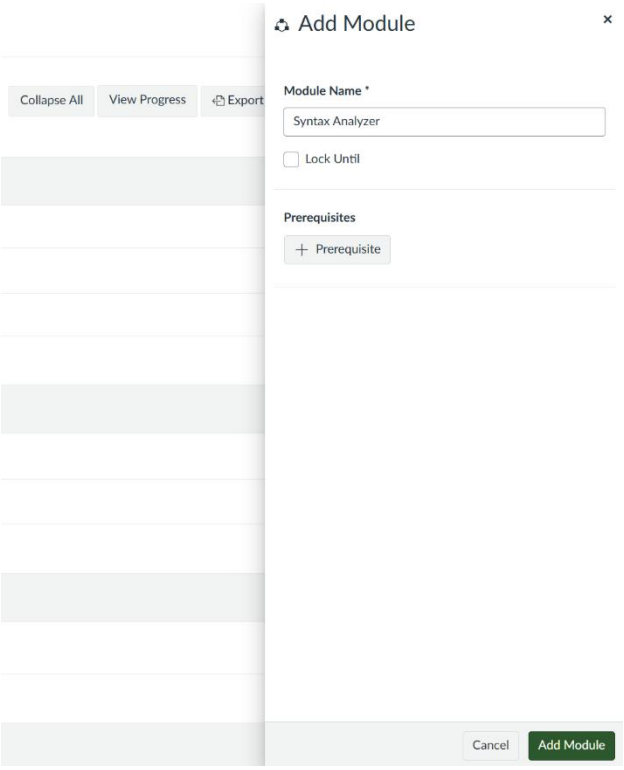

Fig. 22. Add Module Panel View

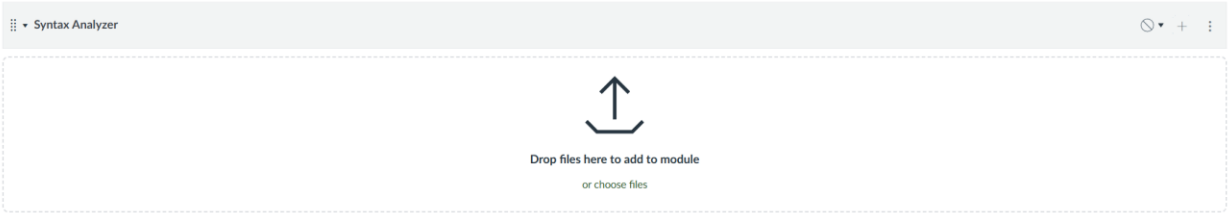

Fig. 23. New Module is now added

Faculty can then add pages, assignments, discussions, quizzes, files, or external links to each module using the + (Add Item) icon (Fig. 24) within the module. Items can be reordered via drag-and-drop to match the desired learning sequence.

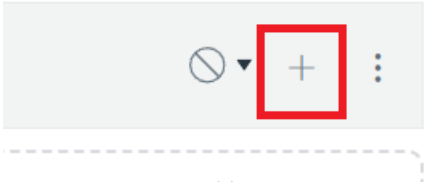

Fig. 24. Add Item Button

Indentation for Visual Hierarchy

Items can be **indented** (Fig. 25) to create sub-levels within a module, visually grouping related content (e.g., core readings vs. supplementary materials). Indentation helps students quickly identify primary and secondary resources without cluttering the module layout (Fig. 26).

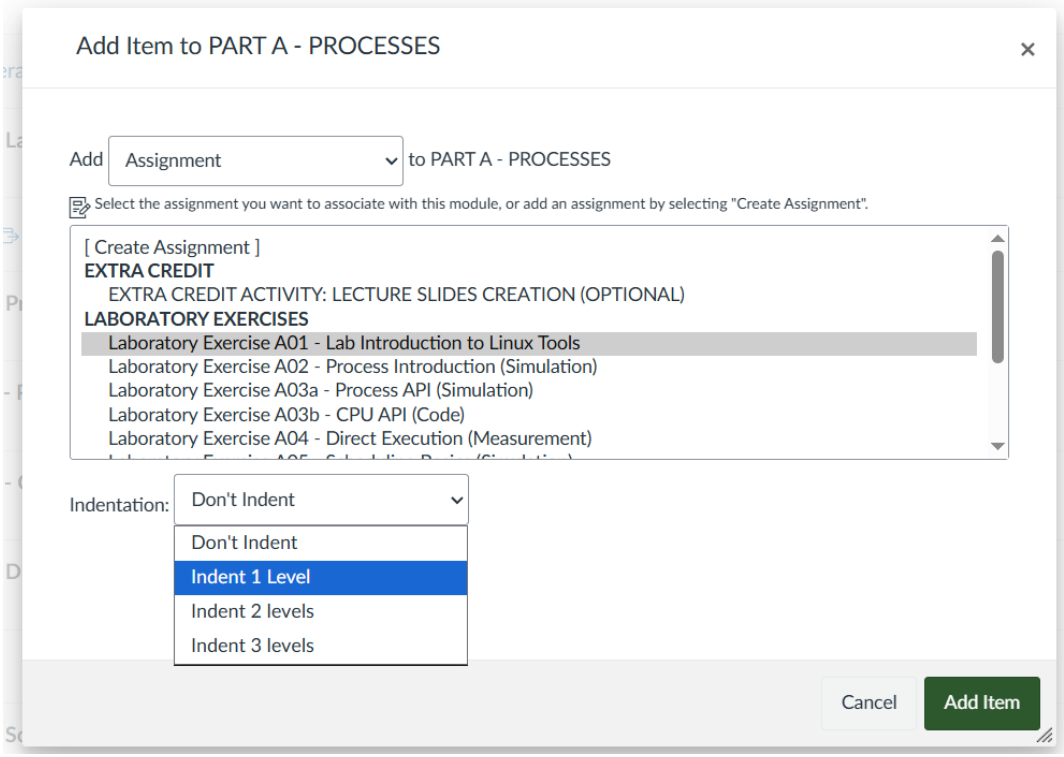

Fig. 25. View after clickin Item Button

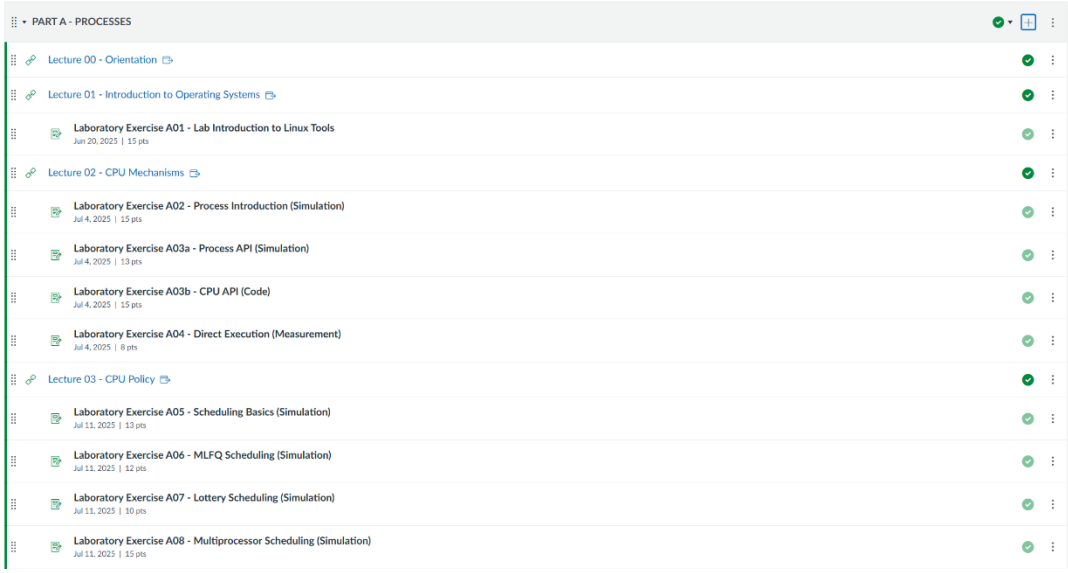

Fig. 26. Layout after Indentation

Locking and Prerequisites

Faculty can control student access to course content by configuring **module prerequisites, requirements, and availability settings (Fig. 27)**. These features allow instructors to guide students through the course in a structured and intentional sequence.

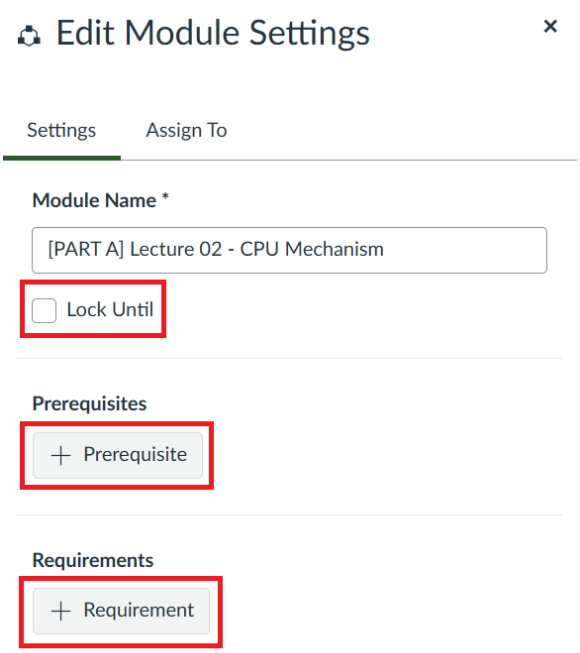

Fig. 27. Lock Until, Prerequisite and Requirement Buttons

Modules can be locked (Fig. 28) until specific conditions are met, such as reaching a defined start date or completing required prior work. By setting availability dates, faculty can prevent students from accessing future modules too early or revisiting content after a certain period, ensuring alignment with the course schedule.

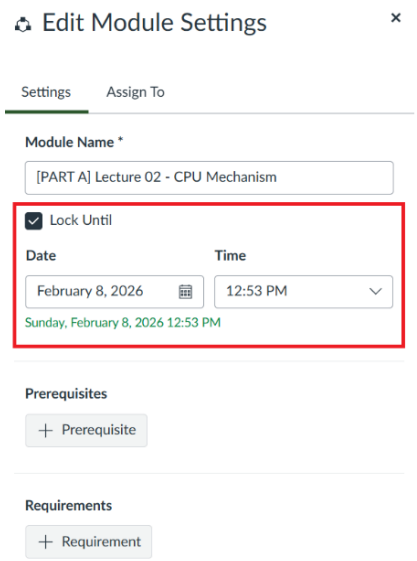

Fig. 28. Usage of Lock Until

Prerequisites (Fig. 29) require students to complete one or more earlier modules before accessing the next. For example, a faculty member may require students to finish "[Part A] Lecture 01: Introduction to Operating Systems" before opening "[Part A] Lecture 02 – CPU Mechanism". Prerequisites help enforce a logical progression through course material and are particularly useful in skills-based or cumulative courses.

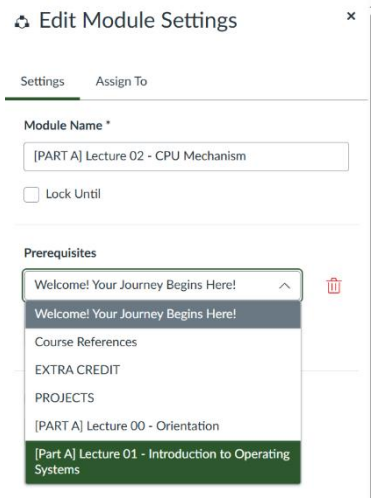

Fig. 29. Usage of Prerequisite

Requirements (Fig. 30) define what students must do within a module to mark it as complete. Faculty may require students to view content pages, submit assignments, achieve a minimum score on a quiz, or manually mark items as done. These requirements provide clear expectations for students and allow the faculty to track progress visually (Fig. 31, Fig. 32).

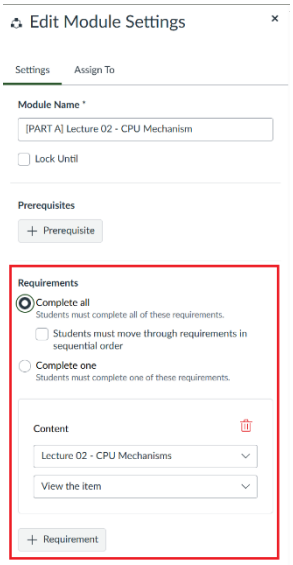

Fig. 30. Lock Until, Prerequisite and Requirement Buttons

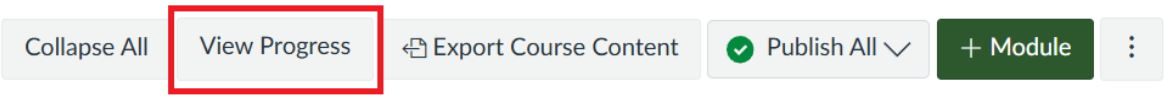

Fig. 31. View Progress Button

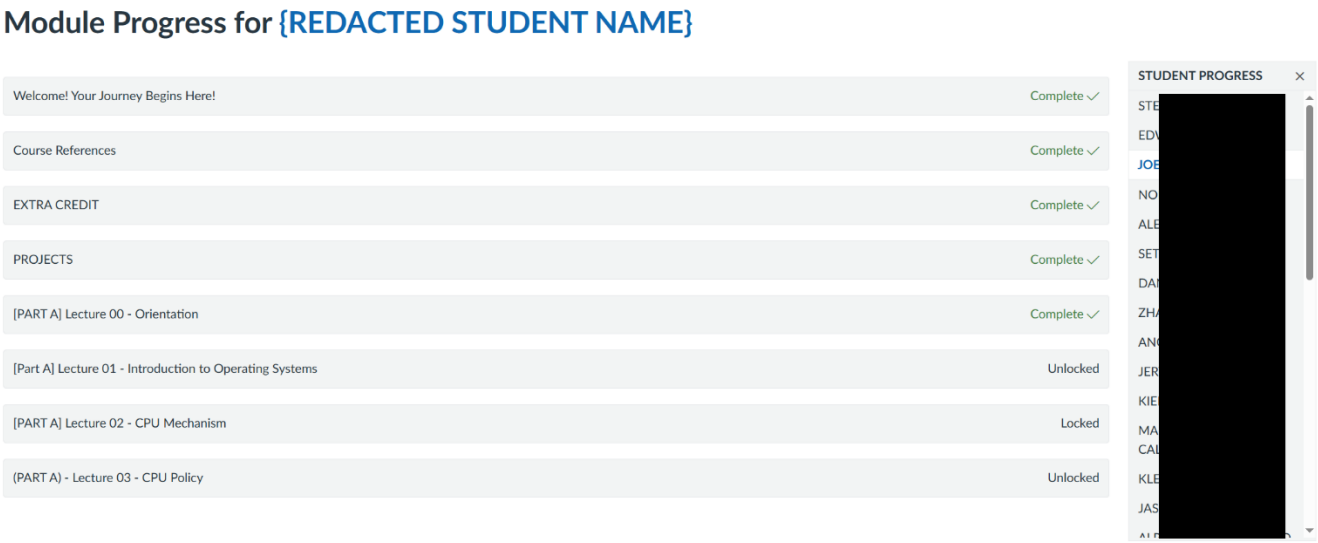

Fig. 32. Module Progress of Students (Student's name are redacted)

When used together, availability dates, prerequisites, and requirements support **guided or sequential learning**, reduce confusion about course expectations, and help students stay on track. Faculty are encouraged to review locked modules and requirements using **Student View** (Fig. 39) to ensure content is released and progresses as intended.

Publishing and Unpublishing Modules or Items

Modules or individual items can be **published or unpublished** (Fig. 33) to control student access. Unpublished content remains invisible to students, allowing faculty to prepare materials without immediate release.

Fig. 33. Publishing / Unpubilshing Modules Buttons

Duplicating or Copying Modules

Existing modules can be **duplicated** (Fig. 34, Fig. 35, Fig. 36) within a course or **imported** (Fig. 37, Fig. 38) from other courses to save time. This is particularly useful for recurring courses, shared resources, or updating previous course content.

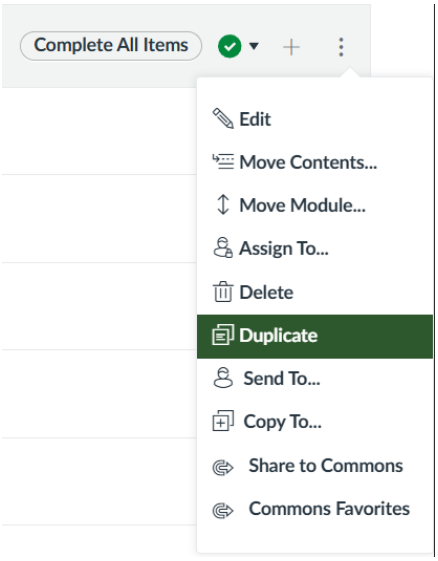

Fig. 34. Duplicate Button

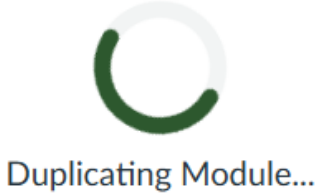

Fig. 35. When clicking the Duplicate Button

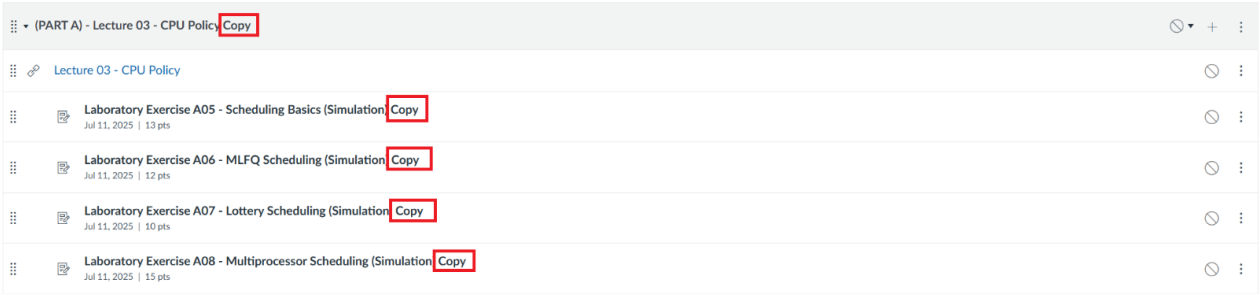

Fig. 36. Duplicated Module

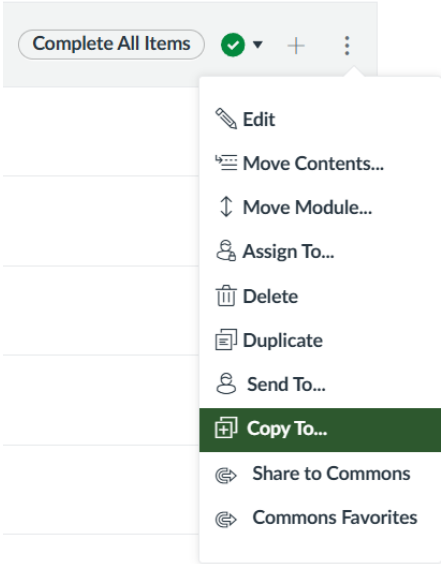

Fig. 37. Copy To Button

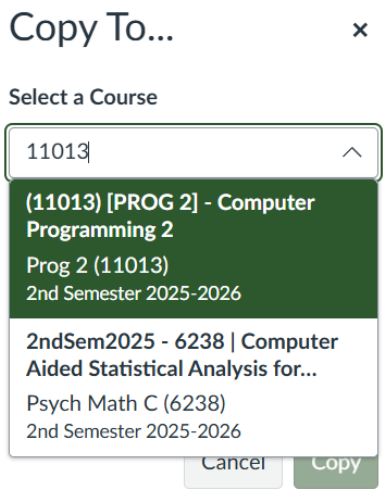

Fig. 38. Selecting a Course to Copy

Previewing Modules

Faculty should always use **Student View** (Fig. 39) to verify module structure, item indentation, locked content, and overall navigation before publishing. Previewing ensures students experience the course as intended and reduces confusion.

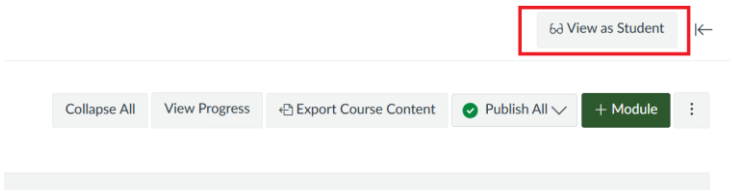

Fig. 39. View as Student Button

2.7 Uploading and Managing Content

Modules provide a structured path through course materials, supporting sequential learning and helping students navigate the course efficiently. Faculty can use modules to organize pages, files, assignments, discussions, quizzes, and external links according to weeks, units, or topics.

Uploading, Replacing and Updating Files

Faculty can upload files directly into modules by selecting **Add Item → File** (Fig. 40). Supported formats include PDF, Word, PowerPoint, Excel, images, and video files. Ensure files are named clearly and systematically to make it easy for students to identify their purpose (e.g., *Lecture1_Introduction.pdf*, *Week2_Assignment.docx*).

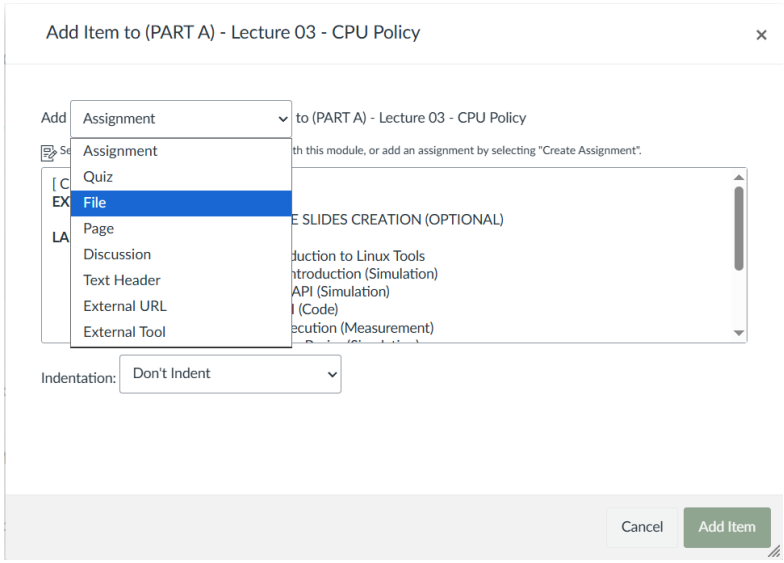

Fig. 40. Add Item → File

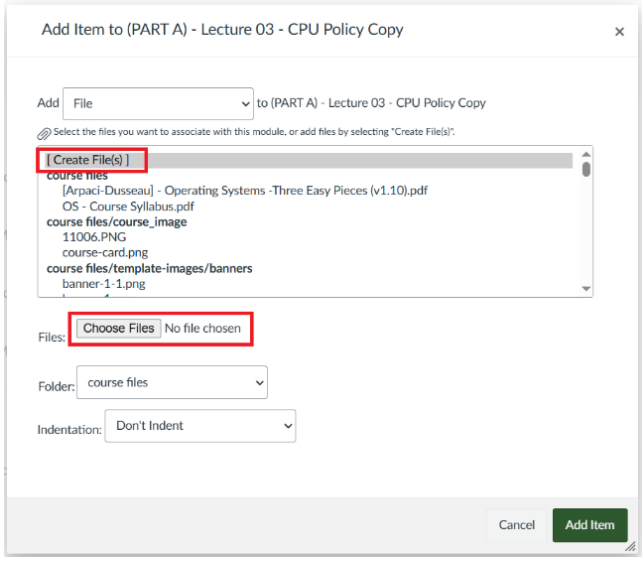

Fig. 41. Uploading a File from Local System

Creating Pages

Pages (Fig. 42, Fig. 43) allow faculty to present course content, instructions, or resources within a module. Using the **Rich Content Editor** (covered in the next section), faculty can add text, images, videos, audio, and links in a single view. Pages should be saved and published only when ready for students to access.

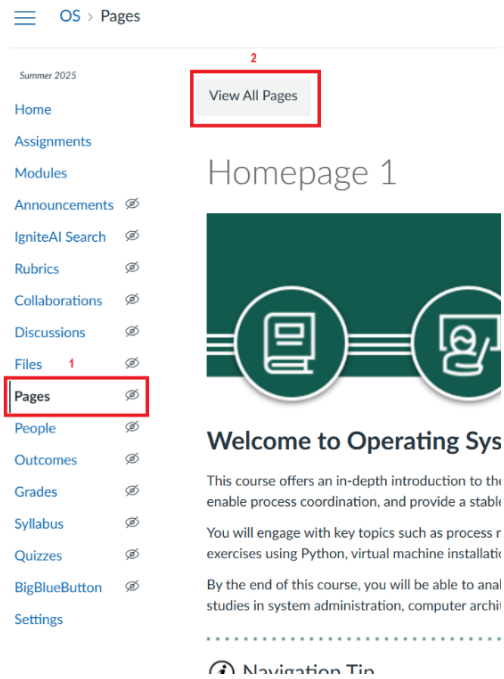

Fig. 42. Navigating to Pages Tab

Fig. 43. +Page Button

Embedding Multimedia and Linking External Resources

Media can be embedded into a page using the **Rich Content Editor**, without any need for coding or technical skills. To embed content, faculty should open or create a page, place the cursor where the content should appear, and use the toolbar above the text box. Images can be added by clicking the **Image** icon and selecting a file from the computer or course files. Videos and audio recordings can be embedded by clicking the **Media** or **Upload** icon and choosing the appropriate file.

For external resources such as YouTube videos (Fig. 45) or educational websites, faculty may simply copy the web link and paste it directly into the page (Fig. 46), or use the **Link** button in the editor. Canvas automatically formats supported links so they display properly on the page (Fig. 47). After adding media or links, faculty should save the page and use **Student View** (Fig. 39) to confirm that the content opens correctly and is easy for students to access.

Fig. 44. Rich Content Editor

Fig. 45. Example Youtube Video to Copy

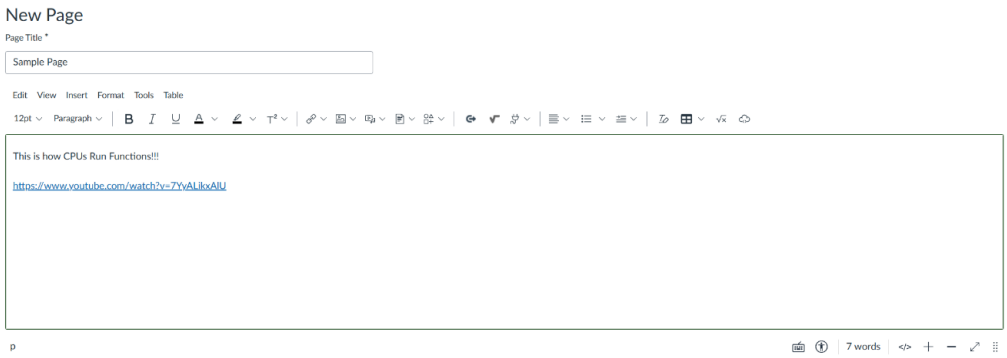

Fig. 46. Embedding the Youtube Link

Fig. 47. What the Page would look like after embedding

3 Online Assessments and Rubrics

Online assessments in CANVAS enable faculty to evaluate student learning, provide timely feedback, and maintain alignment with course objectives. CANVAS supports a wide range of assessment types, including assignments, quizzes, and discussions, along with tools for organizing grades and applying rubrics. Proper configuration of assessments ensures clarity, fairness, and consistency throughout the course.

3.1 Creating Assignments

Faculty can create assignments through the Assignments page (Fig. 48, Fig. 49) or directly within modules. When creating an assignment, the interface appears similar to a Page, as it uses the same Rich Content Editor for adding instructions, text, images, videos, and links. However, the Assignment page includes additional controls (Fig. 50) specifically for assessment, such as submission type (online, file upload, text entry, external tools, or on paper), grading method, point value, due dates, and availability dates.

These added settings allow faculty to define how students will submit their work and how it will be evaluated. Providing clear instructions and submission expectations within the assignment description helps reduce student confusion and ensures smoother submission and grading processes.

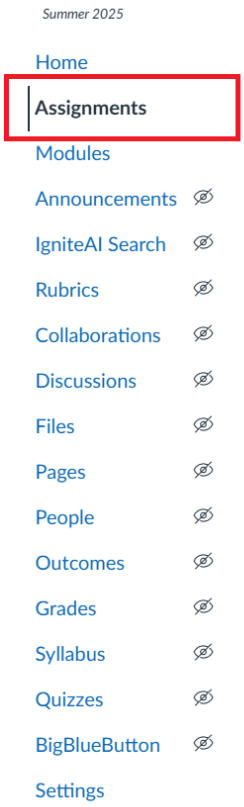

Fig. 48. Assignment Tab

Fig. 49. +Assignment Button

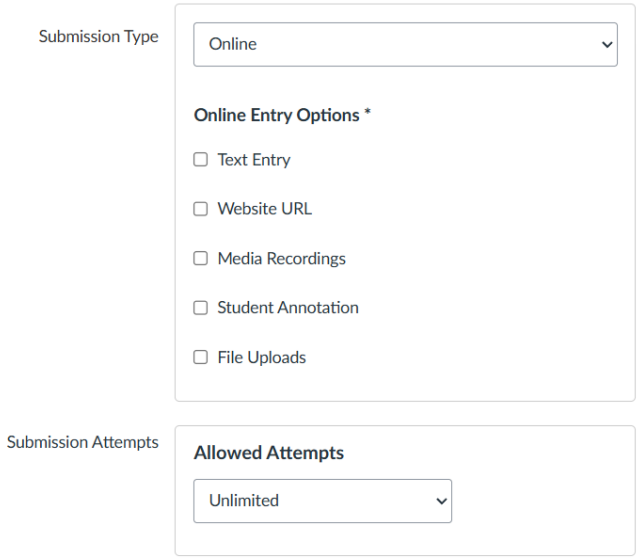

Fig. 50. Additional Assignment Controls

3.2 Creating and Managing Quizzes

Canvas quizzes (Fig. 51) may be used for formative or summative assessments. Faculty can create quizzes (Fig. 52) that include a variety of question types such as multiple choice, true/false, short answer, and essay questions. Canvas currently supports **two quiz engines: Classic Quizzes and New Quizzes** (Fig. 53). Both can be used to assess student learning, with New Quizzes offering additional features such as improved question management and enhanced assessment options.

Quiz settings allow instructors to control time limits, number of attempts, question shuffling, access codes, and availability dates. Quizzes should always be previewed before publishing to ensure accuracy, proper configuration, and the intended student experience.

A more detailed, step-by-step discussion of quiz creation, including differences between **Classic Quizzes and New Quizzes**, question banks, and advanced quiz settings, is provided in the **Growing with Canvas** course. Faculty are strongly encouraged to review the dedicated quiz module in that course for a deeper and more practical understanding of Canvas quiz tools.

https://usjr.instructure.com/courses/106/modules#module_145

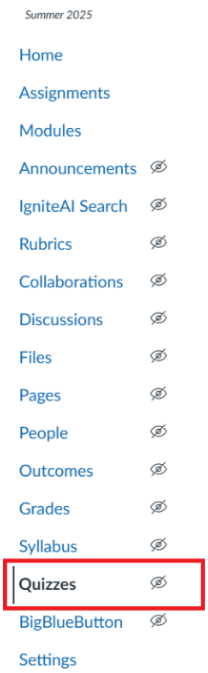

Fig. 51. Quizzes Tab

Fig. 52. +Quiz/Survey Button

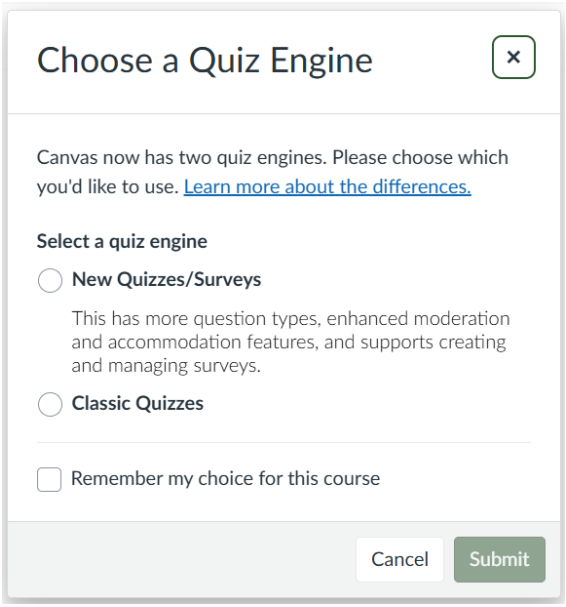

Fig. 53. Two Types of Quiz Engine

3.3 Creating and Using Rubrics

Rubrics (Fig. 54) clarify grading expectations and support consistent evaluation. Faculty can create rubrics (Fig. 55, Fig. 56) directly in Canvas and attach them to assignments or discussions (Fig. 57, Fig. 58). Rubrics may be used for grading, outcome tracking, or feedback only. Clear criteria descriptions improve transparency for students.

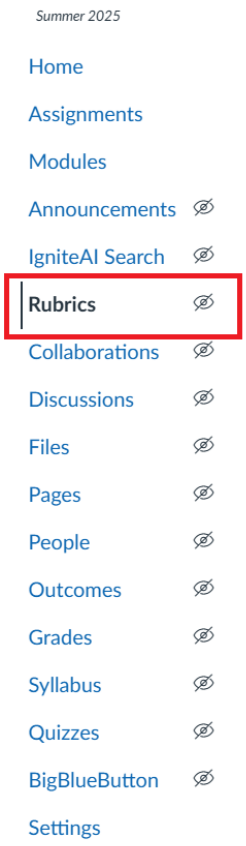

Fig. 54. Rubrics Tab

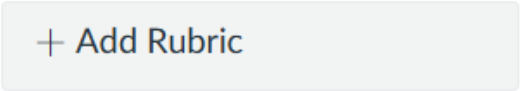

Fig. 55. +Add Rubric Button on Rubrics Tab

PROJECT 01 - CPU SCHEDULING VISUALIZATION

Criteria	Ratings				Pts
CORRECT IMPLEMENTATION OF ALGORITHMS	**50 pts** **Perfect Implementation** Output and logic fully correct and matches expected results	**35 pts** **Almost Perfect** Minor issues or inconsistences in metrics or ordering	**25 pts** **Functioning but Mediocre** Runs but contains noticeable flaws or incomplete logic.	**0 pts** **No Real Effort / Incorrect Logic** Incorrect implementation or clearly copy-paste code with no understanding.	50 pts
TERMINAL OUTPUT AND FORMATTING	**20 pts** **Perfect** Clear ASCII Gantt chart, complete and readable process table, correct average output.	**16 pts** **Almost Perfect** Mostly correct, minor formatting or readability issues.	**9 pts** **Acceptable** Output exists but lacks clarity or completeness.	**0 pts** **No Real Effort / Incorrect Logic** No usable output or missing required parts.	20 pts
CORRECT METRIC CALCULATIONS	**20 pts** **All Metrics Correct** CT, TAT, WT, RT, and averages are all accurate	**15 pts** **Minor Errors** Some rounding or calculation errors, but mostly correct.	**9 pts** **Partially Correct** Half or fewer metrics correct or computed.	**0 pts** **Incorrect or Missing** Metrics are missing or entirely wrong.	20 pts
GITHUB USAGE AND CODE QUALITY	**10 pts** **Excellent** Good commit history, readable code, well-organized repo, good README.	**7 pts** **Good** Mostly meets expectations with small gaps (e.g., missing screenshot).	**4 pts** **Acceptable** Minimal README, messy commits or poor structure.	**0 pts** **Poor or No Use of GitHub** No real use of GitHub or minimal dumps with no history.	10 pts
					Total Points: 100

3.4 Providing Feedback through SpeedGrader

Canvas allows faculty to give feedback through annotations, comments, audio/video feedback, and rubric-based scoring (Fig. 59, Fig. 60). Timely and constructive feedback supports student learning and engagement.

Fig. 59. SpeedGrader Button through Assignments

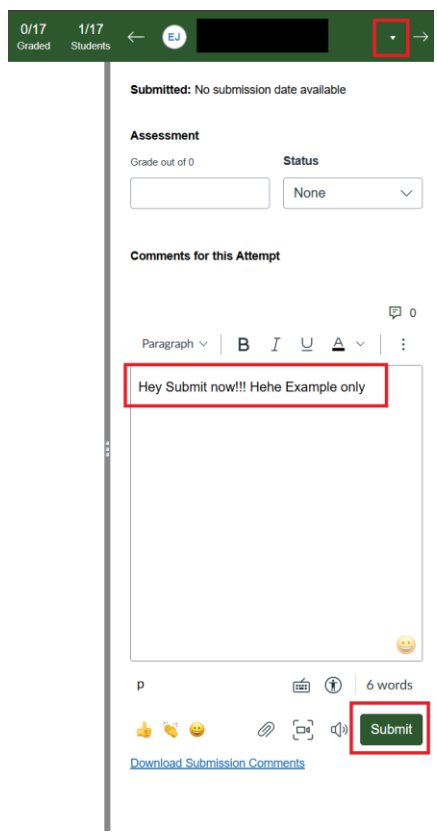

Fig. 60. Feedbacking a Student

4 Gradebook Management and Analytics

4.1 Navigating the Gradebook

The Gradebook (Fig. 61) displays student submissions, scores, and overall performance. Faculty can customize views, reorder columns, and apply filters to focus on specific students or assignments.

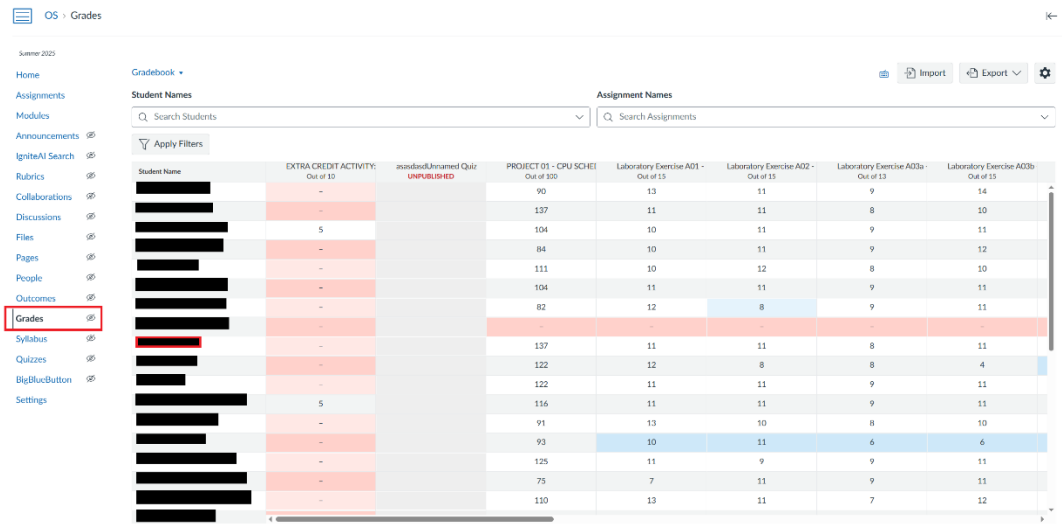

Fig. 61. Grades Tab

4.2 Grading and Posting Policies

Faculty may use manual or automatic posting policies (Fig. 62, Fig. 63) to control when grades and feedback are visible to students. Posting policies should be used carefully to avoid releasing incomplete or unreviewed grades.

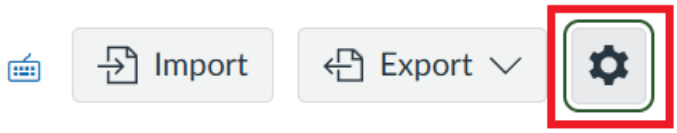

Fig. 62. Settings Button in Gradebook

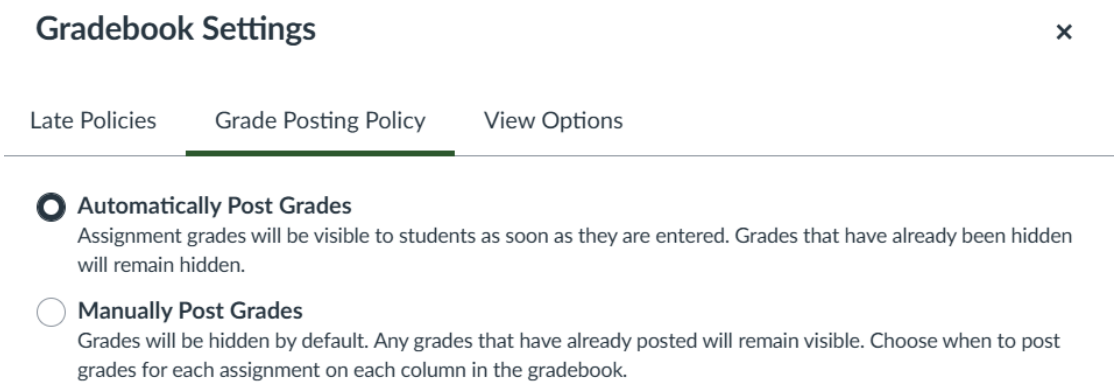

Fig. 63. Grade Posting Policy Tab in Gradebook

4.3 Managing Late, Missing, and Excused Work

Canvas allows faculty to apply late policies, mark assignments as missing or excused, and override scores when necessary (Fig. 64). Clear communication of grading policies ensures fairness and consistency.

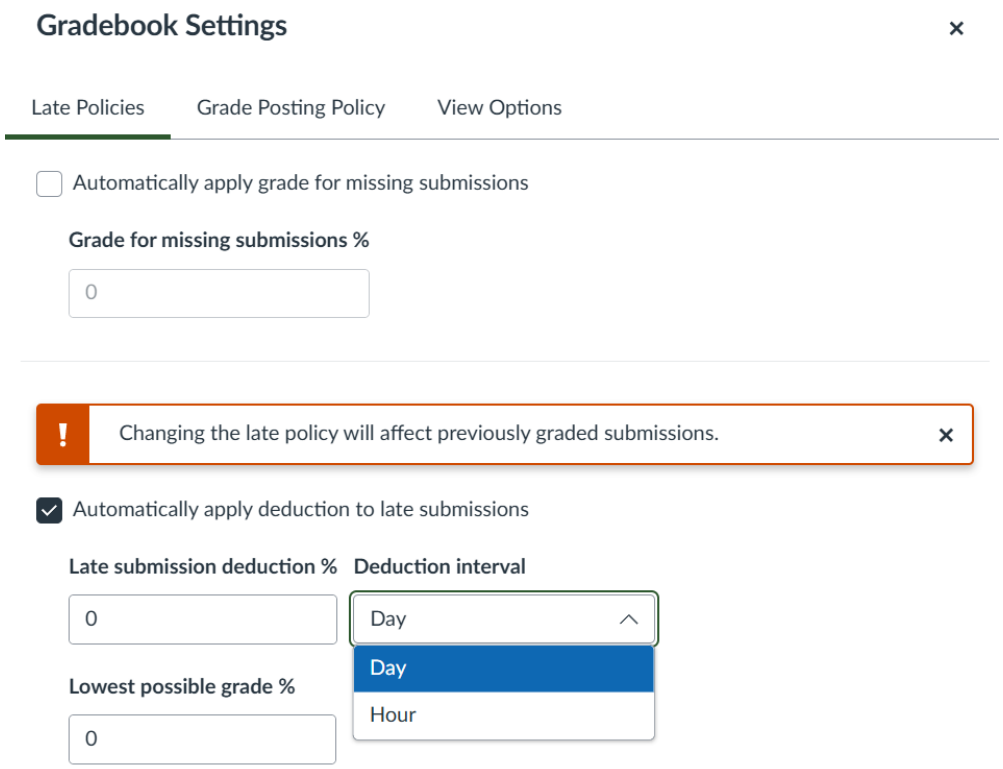

Fig. 64. Late Policies Tab in Gradebook

4.4 Exporting and Importing Grades

Canvas allows grades to be **exported as a .csv file** (Fig. 66), which faculty can download (Fig. 65) and import/open in Microsoft Excel. For this reason, the institution uses a **separate Excel-based grading sheet** to compute and finalize students' official grades. This approach provides greater flexibility, accuracy, and alignment with institutional grading requirements.

As a result, the **Canvas Gradebook should be treated primarily as a reference tool** for monitoring student performance and recording scores throughout the term. Final grade computation and submission should be completed using the official Excel grading sheet.

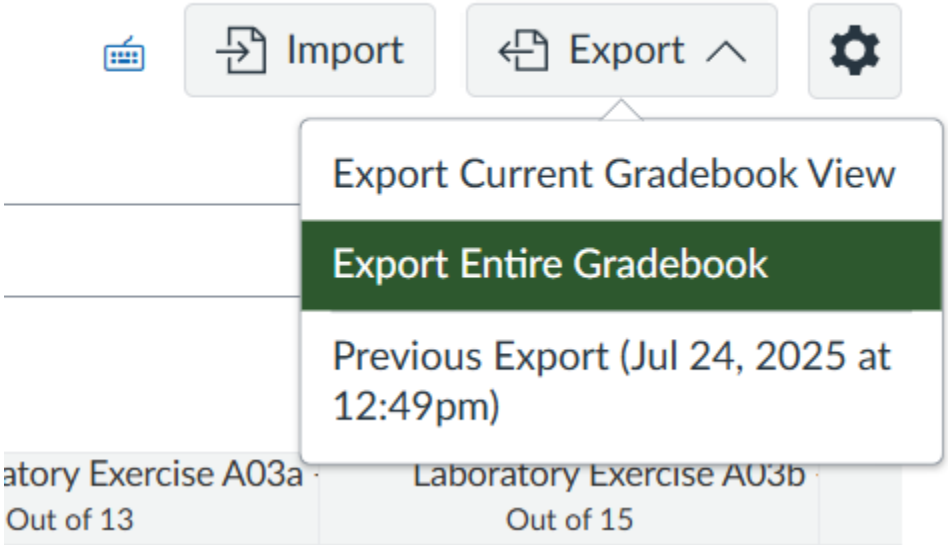

Fig. 65. Exporting the Entire Gradebook

Fig. 66. The .csv file received after downloading entire gradebook

4.5 Using Analytics and Reports

Course analytics provide faculty with insights into student activity, participation, and performance trends within a course. These tools allow instructors to view key indicators such as the **average course grade (Fig. 67)**, **Canvas online activity (Fig. 68)**, **student participation (Fig. 69)**, and **assignment and quiz submission patterns (Fig. 70)**. Analytics can help faculty identify students who may be at risk of falling behind and support timely instructional adjustments or interventions.

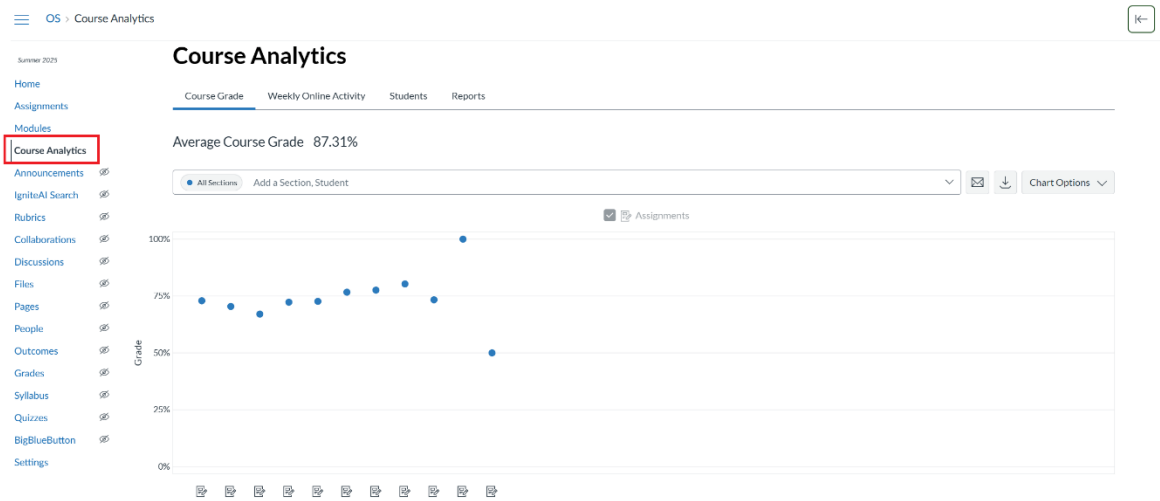

Fig. 67. Course Grade Analytics of Students through Course Analytics Tab

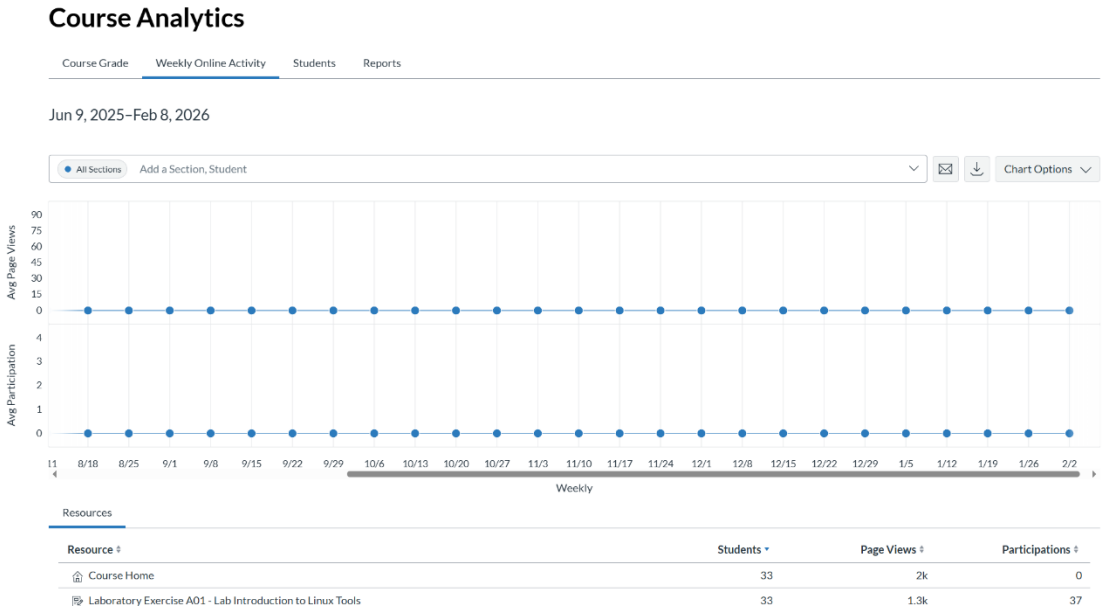

Fig. 68. Student's online activity in Canvas through Course Analytics Tab

Course Analytics

Course Grade | Weekly Online Activity | Students | Reports

Course Activity	Run Report

Fig. 70. We can run report for Assignment and Quiz submission patterns of students

By default, **Course Analytics is hidden** from the course navigation. To access it, faculty must navigate to **Course Settings** → **Navigation** (Fig. 12, Fig. 13) and enable the **Course Analytics** tab. Once enabled, instructors can view detailed course analytics, while the tab remains hidden from students in **Student View**, ensuring that only faculty can access this information.

5 Student Engagement Tools

5.1 Announcements

Announcements (Fig. 71) allow faculty to communicate timely updates, reminders, and clarifications. Posting regular announcements helps maintain instructor presence and keeps students informed.

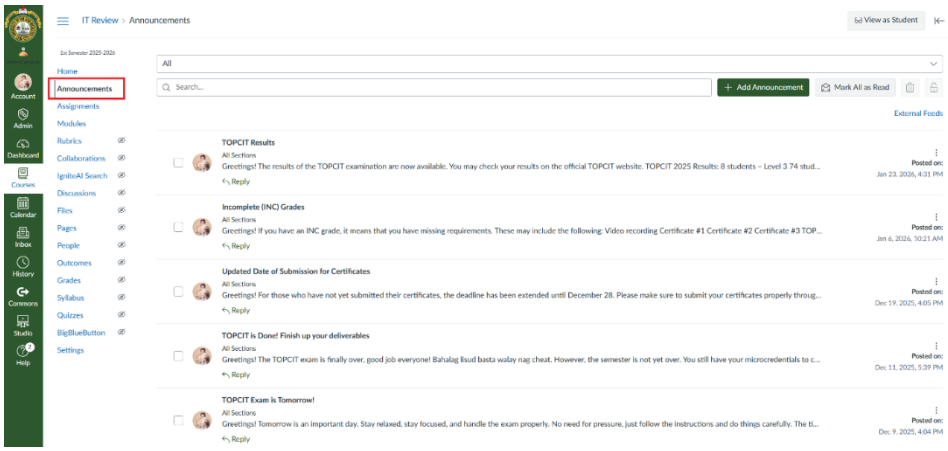

Fig. 71. Announcement Tab

5.2 Conversations and Inbox

The Canvas Inbox (Fig. 72) allows private messaging between faculty and students or groups. Messages should be used for course-related communication and monitored regularly.

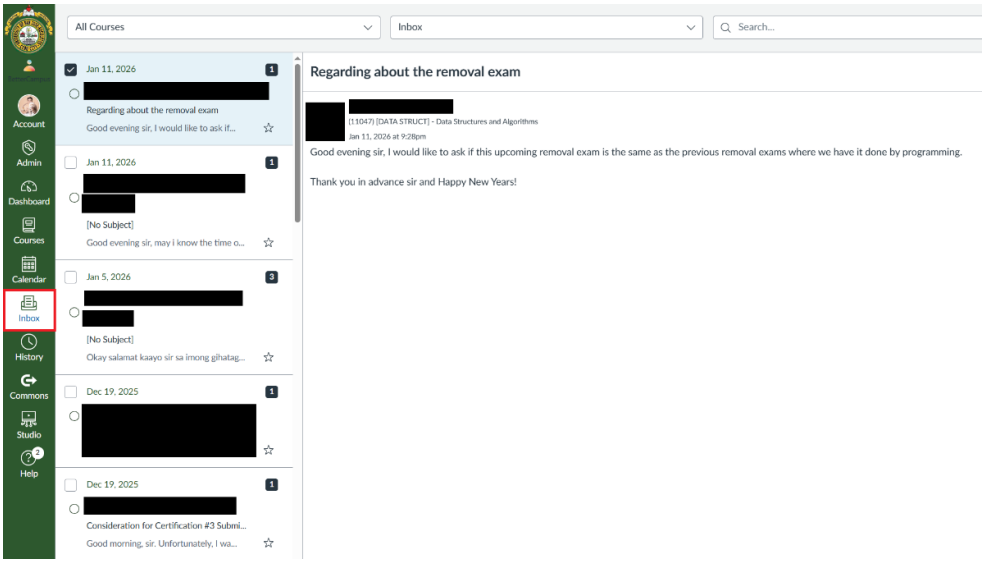

Fig. 72. Canvas Inbox

5.3 Calendar and Scheduling

The Canvas Calendar (Fig. 73) displays assignment due dates and events. Faculty can schedule activities and use the Scheduler tool for consultations or presentations.

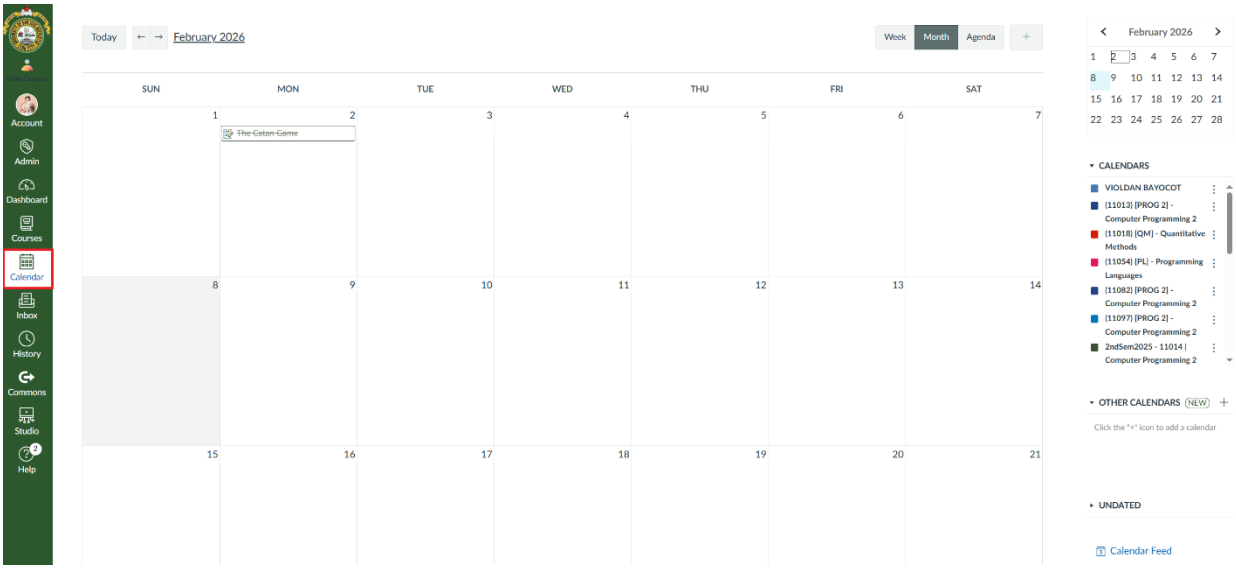

Fig. 73. Canvas Calendar

6 Final Reminders

6.1 Final Notes and Recommendations

This manual provides a guided overview of essential features and practices for managing courses in the CANVAS Learning Management System. It is intended to support faculty in setting up course content, assessments, and grading workflows in a clear and organized manner.

Faculty are strongly encouraged to complete the **Growing with Canvas** course, which offers a more detailed, hands-on exploration of Canvas tools and best practices. While this manual summarizes key concepts, the course provides step-by-step demonstrations and deeper guidance for effective course design and delivery.

For technical concerns, missing courses, or system-related issues, faculty should coordinate with their designated LMS administrators.

6.2 Support and Assistance

For concerns related to course access, enrollment, or system behavior, faculty may contact the LMS administration team. Questions related to teaching load and course provisioning should first be verified in the Student Information System (SIS).

Additional learning materials, tutorials, and best practices are available in the **Growing with Canvas** course.

6.3 Document Scope and Updates

This manual reflects USJ-R CANVAS LMS features and institutional practices as of 2026. System features and workflows may evolve over time. Faculty are advised to refer to official Canvas documentation and institutional announcements for updates or changes.

Document Version: **v1.0**
Created by: Engr. Violdan E. Bayocot

*This document serves as a quick-reference guide to support faculty use of **USJ-R CANVAS LMS** and should be used alongside the **Growing with Canvas** course for comprehensive training.*
